

HATSMITHE

PRINTABLE HEAD-MEASURING TAPE

Measuring Tape Instructions - construction:

Print this page out at 100% size with no scaling - Cut around the tape parts including the yellow tabs

Either glue the pieces together via the yellow tabs or secure with tape on back and front.

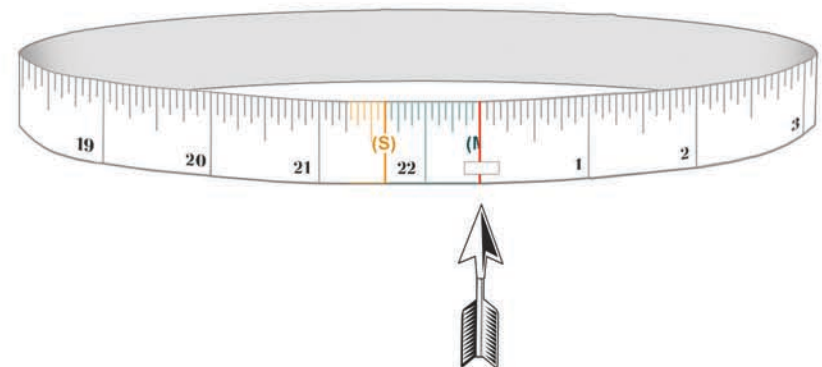

Measuring Tape Usage

Once constructed, place the beginning part of tape (red line) on top of the size you think you are (e.g.(M) as shown in illustration) and secure with invisible tape.

Place the now pre-sized measuring tape over your head to it's widest part. If the tape seems too loose, try the next size down. If the tape will not go over your head or sit far enough down, try the next size up and so on.

Bear in mind that a bigger hat can be adjusted down with the inserts, but a small hat cannot be made larger.

Alternatively, you can get your exact measurement by wrapping the tape around your head at it's widest and deciding from there if you need to size up or not.
